Penna.

October 15. 1862

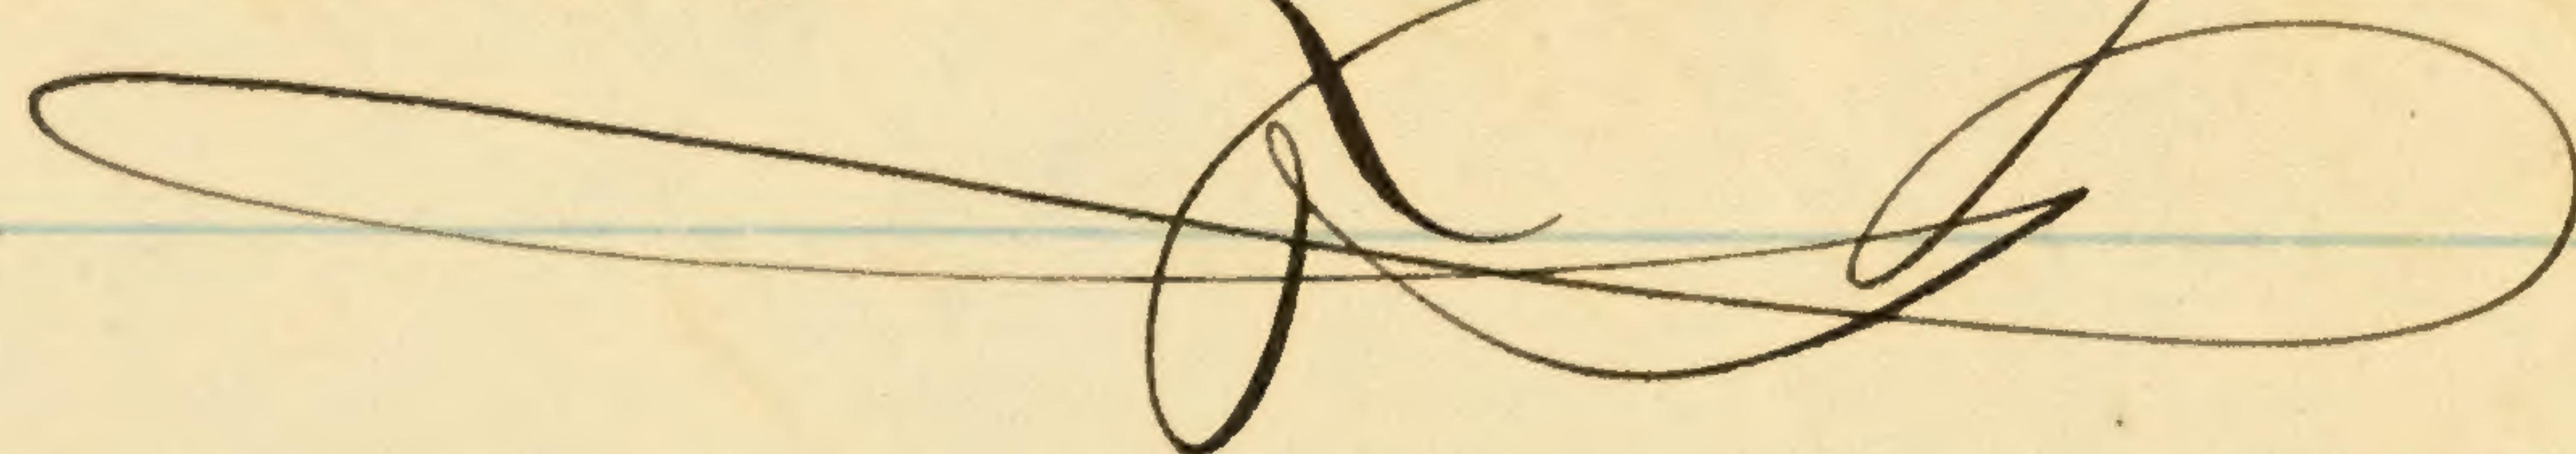

Dr. Engleman

Dear Sir,

Dr. Gray wrote during the summer that you were desirous of Specimens of *Ellisia Mycteria* L. to compare with *E. ambigua* Mitt. Being sick at that time I despatched Mr. T. J. James to send you Specimens from his that I gave him at the time I collected, as my Specimens were 40 miles beyond my reach at that time: He sent you, I believe, and as I have, during my convalescence, visited the place of my Herbarium, have brought Specimens to replace Mr. James' and also send you some more: You will find some old seeds: whether they possess vitality enough for your purpose you will judge: Fresh seeds may be obtained next June unless the locality has been interfered with. Will be glad to serve you in any way botanically in my power

Yours most truly

E. Laning

I have endeavored to keep the Specimens separate by means of slips of paper. Many specimens are much larger than those sent you. Have you a spare specimen of *E. ambigua*? E.L.
